

b) Create a python program to input marks of 10 students and print the maximum mark, minimum mark and average mark of the students.

main.py	Output
<pre>1 # b) Program to find max, min, and average of 10 student marks 2 3 marks = [] 4 5 print("Enter marks for 10 students:") 6 for i in range(1, 11): 7 mark = float(input(f"Enter mark for student {i}: ")) 8 marks.append(mark) 9 10 maximum_mark = max(marks) 11 minimum_mark = min(marks) 12 average_mark = sum(marks) / len(marks) 13 14 print("\n--- Results ---") 15 print(f"Maximum Mark: {maximum_mark}") 16 print(f"Minimum Mark: {minimum_mark}") 17 print(f"Average Mark: {average_mark:.2f}")</pre>	<pre>Enter marks for 10 students: Enter mark for student 1: 45 Enter mark for student 2: 50 Enter mark for student 3: 60 Enter mark for student 4: 88 Enter mark for student 5: 75 Enter mark for student 6: 90 Enter mark for student 7: 88 Enter mark for student 8: 65 Enter mark for student 9: 32 Enter mark for student 10: 10 --- Results --- Maximum Mark: 90.0 Minimum Mark: 10.0 Average Mark: 60.30 === Code Execution Successful ===</pre>

c) Create a program to input five marks of a student and display the grades.

- Mark > 75 – A
- Mark 65 to 75 – B
- Mark 55 to 64 – C
- Mark 45 to 54 – S
- Mark < 45 – F

main.py	Output
<pre>1 2 3 total_marks = 0 4 print("Enter 5 marks for the student:") 5 for i in range(1, 6): 6 mark = float(input(f"Enter mark {i}: ")) 7 total_marks += mark 8 9 average_mark = total_marks / 5 10 print(f"\nAverage Mark: {average_mark:.2f}") 11 12 # Conditional Statements 13 if average_mark > 75: 14 grade = "A" 15 elif 65 <= average_mark <= 75: 16 grade = "B" 17 elif 55 <= average_mark <= 64: 18 grade = "C" 19 elif 45 <= average_mark <= 54: 20 grade = "S" 21 else: 22 grade = "F" 23 print(f"Final Grade: {grade}")</pre>	<pre>Enter 5 marks for the student: Enter mark 1: 55 Enter mark 2: 60 Enter mark 3: 88 Enter mark 4: 90 Enter mark 5: 100 Average Mark: 78.60 Final Grade: A === Code Execution Successful ===5</pre>

d) Write a program to input a series of numbers terminated by -999. Calculate and print the sum of the numbers entered.

main.py	Output
<pre>1 # d) Program to sum numbers until -999 is entered 2 3 total_sum = 0 4 print("Enter numbers to sum (Enter -999 to stop):") 5 6 while True: 7 number = float(input("Enter a number: ")) 8 9 if number == -999: 10 break 11 12 total_sum += number 13 14 print(f"\nThe total sum of the entered numbers is: {total_sum}")</pre>	<pre>Enter numbers to sum (Enter -999 to stop): Enter a number: 15 Enter a number: 20 Enter a number: 12 Enter a number: 5 Enter a number: 3 Enter a number: -999 The total sum of the entered numbers is: 55.0 === Code Execution Successful ===</pre>
